Here's our statement on this. I will get you a link to the data asap.

EPA has released new monitoring data as part of the agency's ongoing analysis of ground water quality in the Pavillion, Wyoming area. These data were collected in collaboration with the United States Geological Survey (USGS), which conducted its own sampling at one of the wells. USGS data were released earlier. EPA's new data and the USGS data are generally consistent with the monitoring data included in EPA's December 2011 Draft Report on Pavillion Area Ground Water Investigation. The new EPA data, along with EPA's draft report and USGS data, will be submitted to an independent expert peer review panel. EPA is also taking public comment on the data and will be extending the comment period to January 15, 2013 to give stakeholders sufficient time to consider all data related to the Pavillion, Wyoming groundwater investigation.

Subject: Pavillion

I understand EPA has posted the results of its own retests at Pavillion and said it would extend the comment period on the draft report. Can you guys send me the link to that info/announcement?

Thanks,
